

Nacci Sustainability document

Nacci Clip-In Battens make great looking ceilings, walls and screens easy. Available in powder coated aluminium including wood grain finish and most commercially available timber species.

Our aluminium components sourced locally, the raw aluminium coming from Tiwai Point Smelter, one of the world's cleanest and greenest smelters. Here is a link to the full sustainability report 2023

When it comes to making an impact, there is nothing quite like a timber ceiling, wall or screen. The colour and warmth of timber adds a special feel to any environment

The Nacci Clip-In Batten system allows continuous lengths of timber to be easily clipped into place, either attached to a suspended ceiling or screwed directly onto existing walls and ceilings. Various sizes and spacing means the look desired is obtained easily.

Nacci Timber Systems Ltd are committed to sustainability. All our timber battens are either FSC or PEFC Certification to ensure timbers sourced from sustainably managed and controlled forests.

Nacci Timber Systems have a Masterspec document accessible via our website where there is also a take-off calculator.

- Everything supplied by local manufacturers resulting in reduced lead times
- Suitable for walls and ceilings and screens
- All profiles are available in random or selected lengths to suit
- Fully integrated LED lights - 1.0m sections fit into the face of the battens
- Sustainably harvested timber (FSC and PEFC certification available)
- Aluminium stocked in raw finish, with the ability to powder coat or wood grain finish to suit.
- Timber is machined on a job-by-job basis and can be supplied raw or coated.
- Easy installation, battens Clip-In to our tracks resulting in a very solid connection
